

POLYSAFEMOON

INTRODUCTION

PolySafemoon is a disruptive auto-generating liquidity DeFi protocol that provides state-of-the-art products and unparalleled high APR on Polygon. The mission of Polysafemoon is to offer investors the best tools to trade, earn, and launch their own crypto projects.

PolySafemoon demonstrates the highest level of transparency, security, and safety, which is a fundamental characteristic of the decentralized finance paradigm. While providing the highest APR on Polygon, PolySafemoon will, under no circumstance, compromise transparency, security, and safety. All the best practices of the trade are implemented to offer the best trading and farming experience for our users.

MISSION

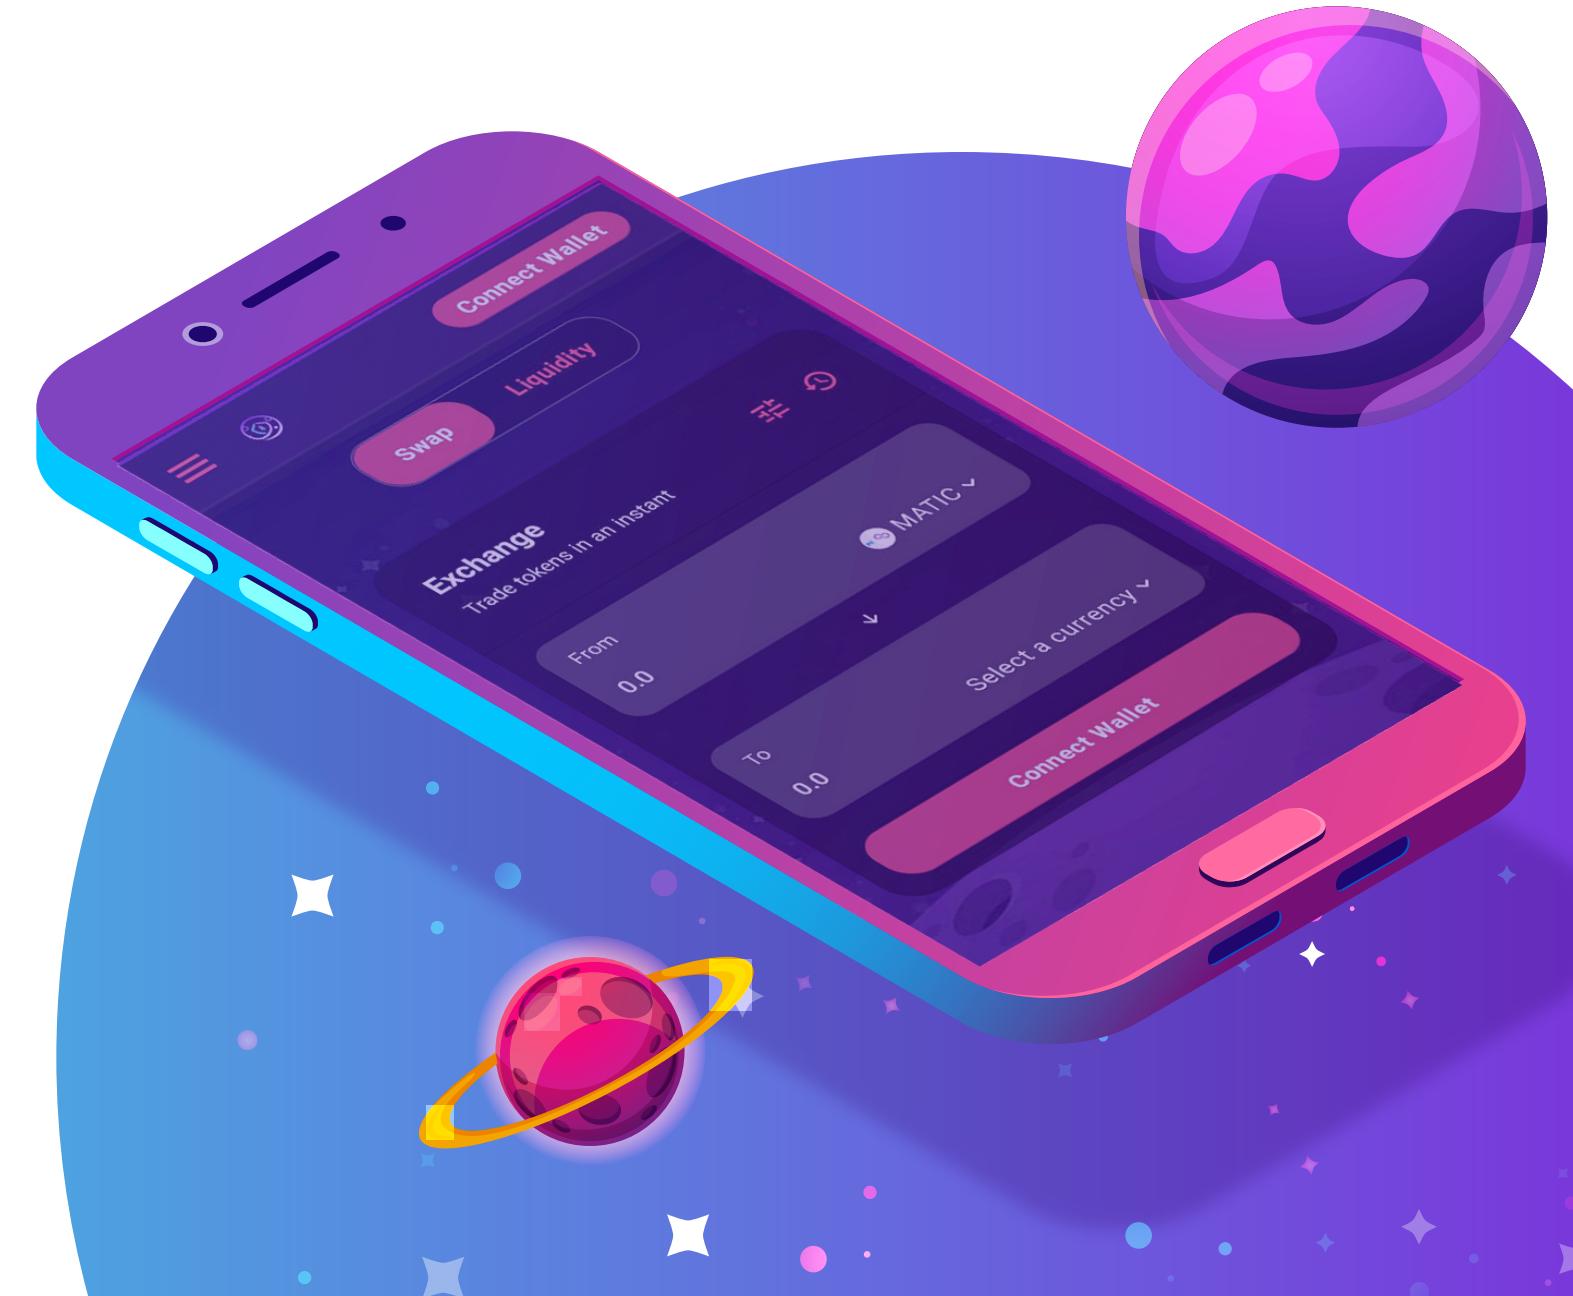

DeFi has introduced many innovative and never-before-seen use cases to the financial market, opening up a whole new world of possibilities for traders and investors. With the arrival and exponential growth of the Polygon blockchain, traders and investors now have the ability to make a lot of money with minimal transaction fees in an actively developing ecosystem of dapps. Yet, as a budding blockchain, Polygon still lacks a complete solution for investors and dapps like how Binance does with BSC and PancakeSwap. PolySafemoon is determined to fill this hole in Polygon and become the one-stop-shop for all DeFi projects and investors on Polygon.

PRODUCTS

MOONSWAP

MoonSwap is the ultimate DEX that supports community tokens on Polygon. Oftentimes DEX charges a fee on each transaction that interferes with the tokenomics and makes it very hard for community tokens to be listed. MoonSwap understands this difficulty, and as a project with a community token itself, MoonSwap aims to swap any Polygon tokens on the DEX. MoonSwap is also an ingenious AMM that integrates other protocols and leverages liquidity of other DEXes on Polygon, thereby allowing users to trade with lower fees at the best rates with liquidity as big as the Moon. Users can enter the contract address of any Polygon token they want and they can make a trade efficiently on MoonSwap. Make more money while spending less at a DEX where transparency and listed tokens abound!

PRODUCTS

MOONPOOL

Every token, including community token, can set up their own liquidity pools and single staking pools, which are called MoonPool, on Poly-safemoon. MoonPool incentivizes holders of their tokens to hold the tokens for longer periods of time by having THE HIGHEST APR ON POLYGON. MoonPool also enables projects to bootstrap their liquidity and has the best parameters and procedures in place for community token on Polygon. The reward amounts and locking periods of each MoonPool are subject to change and they can be modified, removed, and/or added per request of partner projects.

Users can enjoy trading and other privileges on the Polysafemoon ecosystem by staking \$PMOON in our MoonPools.

PRODUCTS

MOONPAD

MoonPad is the ultimate launching pad of Polygon. Even though Polygon has a lot of potential to be one of the biggest blockchains, it is lacking an organized place for projects to have their IDOs. Many have to host their IDOs on other chains or on sketchy sites. This acts as a barrier for both developers and investors to come to Polygon, and MoonPad will solve this problem.

All Polygon projects are welcome to have their IDOs on MoonPad. The PolySafemoon team can support new projects both in terms of marketing and technicality so they can have the most successful IDO possible on MoonPad. A completely integrated ecosystem of PolySafemoon that supports launching, trading, staking, and liquidity will be the most ideal solution for anyone who would like to BUIDL on Polygon.

TOKENOMICS

Ticker: \$PMOON

Total supply: 1,000,000,000,000,000 \$PMOON

All buying transactions are tax-free. Each selling transaction is taxed a 6% fee, which is split 3 ways:

3% distributed to existing holders

2% for adding liquidity

1% burned

By implementing anti-bot features that guarantee everyone an equal chance to invest in IDOs, MoonPad will be the go-to IDO platform for all investors on Polygon.

ALLOCATION

- 30% public sale
- 5% marketing
- 5% private sale
- 5% advisors
- 25% liquidity
- 20% staking and rewards
- 10% development
